

## Your favorite software is back with a lot of surprises!

We are happy to present you the last version of CompeGPS Land/Air, which work with TwoNav devices (Sportiva, Aventura, TwoNav iPhone and Evadeo) but also with Magellan, Garmin, Lowrance, and almost all new GPS receivers for the upload/download of waypoints, routes and tracks. This new release reserves you a bunch of new features.

New interface to manage all your functions at one glance, a powerful 3D motor to display every kind of maps (topographic, vectorial, satellite, etc.) in 3D directly in the main window, and a revolution in the way you will communicate with your GPS device.

Exit the old and complicated system of activation, you will now register your maps in only 2 clicks!

Let's discover together this new version of the best outdoor software for PC and laptop.

### Graphical improvements for a new user interface

The design has been slightly changed to propose you more simplicity and improve the user experience. You will be able to display all your information on the same screen with the multi-windows system. For example, mix 2D and 3D view of the current track to gain in accuracy during the preparation of your trip or display at the same time the graph and all the proprieties of your interest (altitudes, accumulated slop, distances and much more). Don't let any place to random.

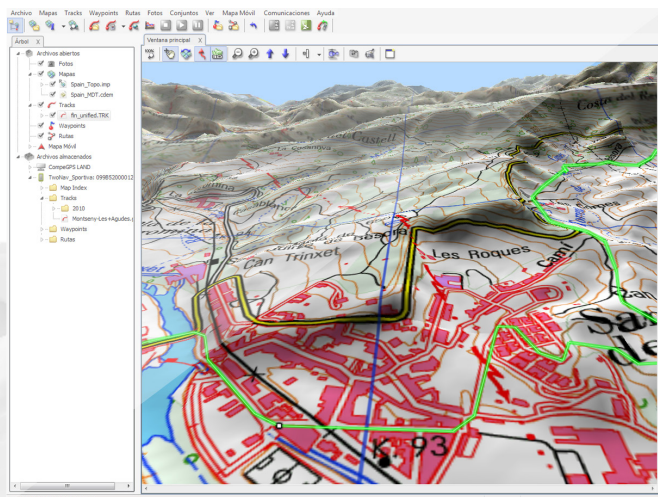

### Easy way to activate your CompeGPS maps

This is the most important improvement for this new version. We made a big step forward in the simplification of the activation process. Activate your maps in your GPS device (TwoNav Sportiva/Aventura, TwoNav iPhone and Evadeo products) just dragging them in the data tree and putting the register code (no need to go to the Web, download the key file,...). Don't waste time anymore, it's just plug and play! You still can use the entire maps format existing (\*.gpx, \*.kml, \*.kmz, \*.tcx, \*.plt, \*.ecw, \*.map, \*.sgp, \*.img, \*.wms ... and many more!), and work with digitized maps that you have in paper and you created from scanned maps.

### Improve your 3D experience

You will now find the 3D feature directly integrated in the main window for even more efficiency. Download our free 3D maps from all around the World and work in the most realistic way. You won't believe it!

Zoom in and out, rotate in all the directions, it's time to give a new dimension to your maps. You will be also able to replay your best performances quietly in front of your PC and in real 3D!

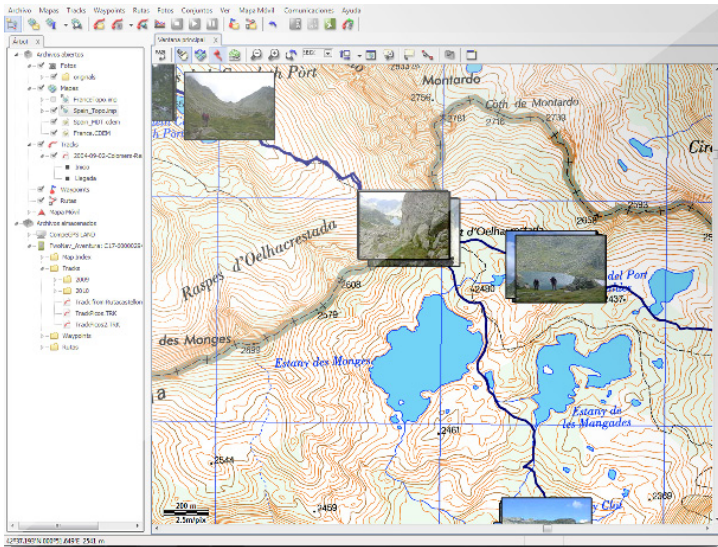

## Communication with your GPS TwoNav Aventura/Sportiva/iPhone or Evadeo

Just plug your CompeGPS product and it will automatically appears inside the software, in the data tree. This will allow you to :

- See the content and transfer your tracks, waypoints and routes from your PC to your GPS just by dragging them in the corresponding file
- Send your maps from your PC to your GPS and vice-versa just by entering your registration code (no need to create the key manually anymore)
- Get the last update of TwoNav software for your GPS TwoNav Sportiva/Aventura or Evadeo

And all this without leaving the CompeGPS Land/Air software, just with Internet connection!

## The cherry on the cake: “Foto GPS” module included

It will let you manage and locate your digital photos regarding to the position they were taken. It can read \*.jpg digital photo and attach to each file the coordinates of the track point. Open your track, select your pictures folder and appreciate the result. You can also place your photo manually, giving coordinates to each picture independently.

It's the best way in addition to the tracks book to remember your best trips and keep a trace of them for ever !
