

TwoNav Sportiva

Less than a year after the launch of its first GPS, TwoNav Aventura, CompeGPS is introducing a new navigator in the Outdoor market: TwoNav Sportiva.

Light, rugged and very powerful, it is designed to follow you anywhere!

Let's take a look at the main characteristics of this device.

100% ready for any outdoor activity!

Thanks to an exclusive partnership with Holux, the top outdoor GPS manufacturer, CompeGPS is now able to offer you a very rugged and waterproof device to accompany you in all your favorite activities, and with its IPX6 certification, there's no need to worry about dust, humidity or water. Add an exclusive integrated 3D compass, a barometer and the powerful Sirf III GPS receiver and you'll be ready to face any situation. You'll never have been so close to the reality!

Whether it's hiking, biking, geocaching, or whatever else you may have in mind, this small and featherweight GPS (only 124g with battery) is so discrete you'll barely know it's there.

The screen

A 3" transfective screen with an impressive resolution of 240x400 to play with your maps in high definition! Use the touch screen technology for greater reactivity and interactivity.

Switch on the 3D mode for even greater realism.

You can freely download the 3D map of your country from www.twonav.com to use it even on CompeGPS Land (PC software) or on TwoNav Sportiva

The best Outdoor software

The very intuitive and efficient TwoNav software provides you with a wide range of tools for enjoying your outdoor activities. You'll be surprised how easy it is to manage your trips with TwoNav.

Prepare your track or route directly using the touch screen. Ideal when you need to act quickly and stay focused on the action!

The TwoNav is also easy to use and is designed to meet the needs of any user profile (from beginners to professionals), so don't miss the opportunity to discover a really different and new means of navigation.

Customize every menu and panel to choose from over 60 data, depending on your needs, navigate track up or north up, display the graph whilst following your track, monitor your speed, your accumulated climb and other such information. It will even tell you the time of sunset and sunrise!

Get regular free updates for your software downloaded directly from www.twonav.com.

A large choice of maps

Thanks to the TwoNav software included, you will have the opportunity to play around with lots of different formats, from topographic maps, satellite pictures, raster maps and urban maps to paper scanned maps (because sometimes don't exist in digital format), *.map, *.jpg, *.gif, *.tif, etc. Just convert them using CompeGPS Land free basic version and transfer them to your GPS.

We also offer maps from all around the world with the exclusive option of downloading them by tiles, departments or zones to better fit your needs, very useful for a holiday trip in a specific area, for example. Find the best maps from Spain, France, Germany, Switzerland, Italy, Finland, Norway, the Netherlands, Austria, Morocco, Sweden, Australia, Tunisia, free USA maps and more.

TwoNav Sportiva comes with a full zone or some tiles included depending on your country. With its 2GB internal flash memory and its 32GB micro SD reader you can take all the maps you need with you, with almost no limit.

The possibilities are endless when you have the freedom to discover!

Manage your data

You can also create unlimited tracks, routes and waypoints as the device is compatible with *.GPX and *.PLT formats, the most common ones, enabling you to download your track from the Internet and transfer it to your GPS.

You can also use CompeGPS Land software (you get a special 50% discount on the software when buying your GPS!) to communicate directly with your TwoNav Sportiva GPS on your PC, prepare and transfer your tracks, routes and waypoints, load your own maps, etc. You will also be able to convert all your data into the necessary format if you want to share it with your friends or publish them in your blog.

Prepare it beforehand at home to give you 100% efficiency in the field!

Bike mount

You'll also find a very resistant bike mount, especially designed to avoid any vibration, inside your box, ready to be fixed onto your bike, so you can be sure it won't move even on the craziest of descent!

Design

58 x 105 x 23mm
124g with battery
IPX6
